

Status of regional PIT-tag coordination efforts

Al Giorgi
BioAnalysts, Inc.

NOAA and the NPCC have requested that the region formulate a plan for executing RME projects that require PIT tags. BPA directed Bioanalysts to coordinate the effort, and develop a draft plan with agency input. That plan addresses management needs and objectives associated with the BiOp, FPW, and Accord RME across the H-categories. This presentation highlights the status and components of the plan. Part of the plan involved the assembly of a PIT tag forecasting database, which will be described in general terms today.
