

PTAGIS4: Introducing the Next Generation PTAGIS Reporting Platform

Craig White

Pacific States Marine Fisheries Commission

Craig.White@psmfc.org

PTAGIS has collected over 55 gigabytes of data since 1988 on approximately 25 million tagged fish with over 114 million interrogations. This data is being made available through a new, easy to use, drag-and-drop, high performance reporting and business intelligent environment. From a standard web browser users will have access to the complete PTAGIS dataset from a single report with the ability to search and sort on all fields including conditional comments! Several new features will be introduced including report subscriptions, interactive self-service data analysis, data visualizations, and many more. We are also making the PTAGIS dataset available from programmatic interfaces by leveraging Web 2.0 technologies including web services.
